

QUALITY HOTEL BATMAN'S HILL ON COLLINS

www.batmanshill.com.au

Water Management

- 12Ltrs per minute showerheads are installed in 103 rooms, and 9Ltrs per minute showerheads are installed in 87 rooms. A project team is working on upgrading all showers to 9Ltrs per minute, and is looking at water saving initiatives for other Hotel areas, including the service/preparation kitchens and public bar
- The project team has successfully implemented waterless urinals in all public toilets, and half flush toilets of 3Ltrs have been installed throughout the hotel.

Waste Management

Waste management is shared in a joint agreement with another hotel which has the facility to store and manage the service of the Hotel's bins. Any green initiative implemented requires a joint agreement between both parties, however the Hotel is in the process of sourcing other arrangements in order to deliver best practice.

Energy Management

- All room key cards operate lighting and air-conditioning upon entering and exiting rooms. 90% of lighting uses energy efficient globes (18 watts, 15 watts and lower)
- 54% of rooms are fitted with 3.8 watt LED globes in bedside lamps and 6 Star energy consumption air conditioners
- Throughout the entire hotel, all corridors and lifts are fitted with movement sensors which automatically switch on lighting when required
- The hot water supply of 54% of rooms is heated as required. The remainder of the hotel rooms' hot water supply is heated by gas on demand, with approximately 800Ltrs in reserve.

Programs currently participating in

Two of the Hotel's most senior committee members are undertaking environmental projects to:

1. Develop Environmental Policies and Procedures for each department
2. Research alternative resources for "Green" best practices.

Projects to be completed

- Water savers on all showers and taps (including kitchen and public bar)
- Waste Management.
