Water Management

- Designed and installed water recovery system for the Hotel's main laundry. The aim of this project is reclaim up to 80% of the water used in the laundry, clean it and redirect it back into the laundry washing machine water supply. The objective is to reduce total water consumption for the Hotel by 30%.
- Systematically updating/replacing all single flush 9 – 12ltr Cisterns and flusher valve units with new 3 - 6ltr Cisterns and dual flush valve units. The aim of this project is to reduce the amount of flusher water consumed by the hotel by at least 12%.

Waste Management

Rydges Melbourne currently recycles all of its cardboard and glass waste through its major waste management contractor; Sita.

Energy Management

A consolidated review of the hotel's heating and air-conditioning plant is underway. All existing pneumatic air flow controllers for heating and cooling are being upgraded to new high efficiency and programmable electronic actuators.

Strategies Implemented

The hotel has half lighting and night lighting through all of its common areas.
