Waste Management

- Paper usage is minimised through electronic communication with clients and amongst staff
- In addition to its business practices, EventOFFICE product assists other businesses to reduce their carbon footprint through minimising paper usage
- The EventOFFICE registration system enables clients to manage registrations, payments and event ticketing all online thereby replacing traditional paper-based methods.

Energy Management

EventOFFICE actively seeks to reduce its carbon emissions and subsequent impact on the environment in the daily operation and management of its business by employing simple, yet effective, energy saving techniques:

- Natural ventilation is used in the office and is combined with powered air conditioning/heating only when required
- Flexible working arrangements have resulted in staff and management working from home 60% of the time. This has resulted in significant savings in lighting, heating and cooling.
- Travel and subsequent carbon emissions are minimised through the use of communication technology and flexible work arrangements
- Virtualisation technology is employed in all servers to reduce the company's carbon footprint.
